

CWG Workplan 2022

Leah Gilbert Morris, EDC

Recap of discussions

WS1

Products, incentives,
innovation

WS2

Best practice in low
carbon transition

WS3

Policy coherence
and alignment

- 🕒 Video content, suitably supported, is a good medium for advancing both *WS1* and *WS2*
- 🕒 There is synergy, and good reasons to distinguish as separate, complimentary projects
- 🕒 WS3 lends itself better to a written approach: survey / white paper etc.
- 🕒 But this area is changing quickly, so timeliness is key, and we need to be conscious about our resources

... our proposal

Innovation Showcase

*Series of webinars, or pre-recorded presentations / interview etc.
and annual “emerging trends” summary paper*

Profile innovation of climate-focused product development (e.g. innovation of new products and/or innovation within existing products at transaction level)

~ 1 webinar per month to complete series (e.g. June, Sept, Oct, Nov, Dec)

Written summary trend analysis published at end of series

Potential Case studies

EDC new sustainable bond framework

MIGA implementation of nature-based solutions in transactions

UKEF profiling Export Development Guarantee for transition

AFD/African Energy Guarantee Facility/European Guarantee for Renewable Energy

Low-Carbon Transition Seedbed

Edited video library of best practice and guidance

Modular education resource on technical approaches and challenges relating to members' transition

Opportunity to film some sections in May and October (at BU meetings)

Contributors could self-produce where possible, or could look for media partner

Potential Case studies

-  Bpifrance approach to portfolio carbon accounting
-  EDC on implementing science-based targets
-  UKEF on implementing TCFD reporting

Challenges

-  Defining low carbon / cleantech
-  How to dialogue with clients?
-  Working with partners to mitigate new risks (AXA XL / NER)

Policy Implementation Tracking

Whitepaper summarizing developments in the policy landscape

Tracking interpretation and progress on policy implementation of joint statement, E3F commitments, etc.

Aim to publish just before COP27 in November, as a benchmark on progress

Crowd-source input by designing a proforma structure. E.g.

- High level objectives
 - Definitions and scope
 - Implementation progress
- + high-level summary and analysis

Next steps

- ① Do you have an innovation product to showcase?
 - ① Or any suggestions from your wider network?
 - ① Can you deliver a case study on an approach to transition challenges? e.g.
 - working with clients / developing products
 - adopting or adapting internal processes
 - classifying, measuring, accounting, reporting
-
